Rotary Tools - (cont.)

Do not allow toollessly placed tool support on of your rotary tool to become commonplace. Always remember that a careless fraction of a second is sufficient to inflict severe injury.

Do not alter or release tool. Any alteration or modification is a misuse and may result in serious personal injury.

This product is not intended for use as a dental drill or in medical applications. Serious personal injury may result.

When using the steel wire, cutoff wheels, high speed cutters or long-life carbide cutters, always have the work securely clamped. Never attempt to hold the work with one hand while using any of these accessories. The reason is that these wheels will grab if they become slightly curled in the groove, and can backlash causing loss of control resulting in serious injury. Your second hand should be used to steady and guide the hand holding the tool. When a cutoff wheel grabs, the wheel itself usually breaks. When the steel wire, high speed cutters or long-life carbide cutter grab, it may jump from the groove and you could lose control of the tool.

Proverbs 10:19
